

Artemisia Intrinsic

Concentrated Handcrafted Ethno Botanical Tincture
60 mL

Intrinsic Spagyric Botanicals

Parasitic Vermifuge & Amoebicide

Traditional Keynotes:

- Parasitic Vermifuge
- Anthelmintic & Amoebicide
- Arthritis
- CFS—Fibromyalgia

Complementary Remedies:

- Para-Tox
- Amoeba-Tox
- Berberine Intrinsic
- Olive Leaf Intrinsic
- Wild Bear Garlic
- Flora Syntropy
- GALT-Fortifier
- Nat Body CLR
- Nat Colon CLR
- CataZyme-7 / CataZyme-U
- Drainage Milieu

Additional Notes:

Otitis Media—15 drops in a teaspoon of warm olive oil. Place in the ear and pack with cotton balls.

Dosage:

One full dropper 2x daily in warm water, or as directed by a Health Care Practitioner

The Intrinsic Spagyric Botanicals are handmade remedies manufactured in accordance with the proven laws and time-honoured processes of Spagyricism, laid down hundreds of years ago. It takes 60-90 days to make the concentrated tincture which has been decanted into a 60mL cobalt blue bottle (protects the remedy). Labelling and bottling are performed without electricity. All raw materials are bio-dynamically grown or wildcrafted, and draw from the finest ancient and modern traditions of herbal medicine from the West, Ayurvedic India, South American Amazon, and Traditional Chinese Botanicals. The name of the (ethno) Intrinsic formulas represents the keynote focal remedy ingredients to which the other ingredients constellate, differentiate and amplify.

According to the World Health Organization, 3.5 billion people currently suffer from some form of parasitic infection. Parasites are not solely a “Third World Problem” linked with malnutrition and poor hygienic practices. A plethora of cases of highly contagious and transmittable parasitic infection exist across the globe, including “developed countries”.

Parasite infestation may be severe or mild. They can be life threatening, or may go undetected for years with no apparent symptoms. When present, the symptoms of parasitic infection vary enormously, often making them hard to distinguish from other conditions. It is believed that a high percentage of conditions today (an estimated 85-95%) involve some form of parasitic infestation.

Parasitic infection commonly leads to poor absorption of critical nutrients, resulting in the development of conditions such as anemia, growth problems, and weakened immunity. Parasites are often found in people with AIDS, chronic fatigue syndrome, Candidiasis, arthritis, allergies, skin conditions, dental problems, and many other disorders.

There are many types of parasites, each with its own particular life cycle and pattern. Over 3000 parasites have been loosely grouped into one of four categories. A more simplified approach is to describe parasites in terms of size, breaking them into either larger (worms/flukes in the intestines and liver) or smaller size (microscopic in size, i.e. protozoa and amoeba).

Humans can play host for a wide variety of different species of parasites that can infect the digestive system, lungs, liver, muscles, joints, throat, brain, blood, skin, and the eyes. These can range from microscopic in size to several feet long, as with the tapeworm.

Microscopic parasites pose a significant risk to human health. Tiny protozoa and amoebae can travel from the intestines to the bloodstream, muscles, and vital organs, where they can impose considerable damage to the organs and tissues of the body. In their resting stage or cyst stage, these parasites are very infectious. Waste products secreted by parasites add another level of toxicity to the organs and systems of the body.

Microscopic and non-microscopic parasites can get into joints, eating away the calcium lining of the bone, and causing arthritic symptoms. These parasites can also eat the protein coating on the nerves (the myelin sheath), causing a disruption in the nerve signaling from the brain. Some parasites function almost like bacteria, traveling through the blood stream to virtually any part of the body.

Parasites can go undetected in the host, as they are able to move from one organ, system, or area of fluid in the body to another. Many well-intentioned, but out of priority, anti-parasitic protocols have inadvertently “chased” parasites throughout the body, as the extracellular matrix (ECM) was not sufficiently stabilized to allow for the appropriate resolution of infection.

Treatment strategies with highly effective botanicals must therefore be completely effective at resolving all forms of parasites, from eggs to maturity, and must be used at the appropriate stage of prioritization. Re-establish the ECM first!

Artemisia Intrinsic was specifically designed as a whole anthelmintic, amoebicide, and vermifuge, using a synergistic blend of herbs that enable the body to expel worms, protozoa, flukes, amoebas and their eggs gently and efficiently.

Ingredients:

Quassia (woodchips) *Quassia Amara*
Black Walnut (hull) *Juglans Nigra*
Grapefruit (seed) *Citrus Paradis*
Wormwood (aerial parts) *Artemisia Absinthium*

Torrey Grandis (seed) *Torrey Grandis*
Papaya (leaf) *Carica Papaya*
Pumpkin (seed) *Cucurbita Pepo*
Quisqualis (fruit) *Quisqualis Indica*
Clove Bud (oil) *Syzygium aromaticum*

Garlic (bulb) *Allium Sativum*
Senna (leaf) *Cassia Angustifolia*

Artemisia Intrinsic

Traditional Phytotherapeutics

Wormwood (*Artemisia Absinthium*) - Wormwood has been used as a powerful tool to fight worm (notably pinworm and roundworm) and other parasitic infestations in humans and animals. It has long been used as an anthelmintic that expels intestinal worms. Wormwood is a nervine tonic that nourishes the nervous system and thus, eases stress and nervous disorders. The herb calms and soothes the nerves and reduces tension and anxiety. Used as a bitter, Wormwood aids in secretions of the gallbladder and liver and is an old and trusted remedy for bilious and liver troubles, jaundice and gallbladder ailments.

Black Walnut Hull (*Juglans Nigra*) – Black Walnut is part of the Juglandaceae plant family and originally comes from Persia (Iran), Greece, the Himalayas and the Orient. Today it is used for viral and parasitic conditions such as, head and body lice, herpes, internal parasites, liver flukes (combined with Wormwood and Cloves) and worms (use unripe or green hulls). It is known that this botanical oxygenates the blood along with its high tannin content and juglandic acid, kills parasites. The Chinese have used this effectively for centuries to kill tapeworms. The brown stain of the green hulls contains organic iodine—an effective antiseptic.

Clove Bud (*Syzygium Aromaticum*) - Cloves are used in Ayurvedic, Chinese medicine and western herbalism. Cloves are used as a carminative, to increase hydrochloric acid in the stomach and to improve peristalsis. Cloves are also proven to be a natural antihelmintic and are effective in killing the eggs.

Garlic (*Allium Sativum*) – Garlic has been used as both food and medicine in many cultures for thousands of years. Garlic is claimed to help prevent heart disease (including atherosclerosis, high cholesterol, high blood pressure) and cancer. In modern naturopathy garlic is used as a treatment for intestinal worms and other intestinal parasites, both orally and as an anal suppository. Garlic cloves are used as a remedy for infections (especially chest problems), digestive disorders and fungal infections such as thrush.

Grapefruit Seed (*Citrus Paradisus*) – Grapefruit seed-extract is an extremely acidic liquid. The product is a bitter and acidic amber-colored liquid. Grapefruit seed-extract exerts antibacterial, antifungal and antioxidant activity due to naringenin. It is used in humans to battle many types of internal and external infections caused from single and multi-celled parasites, fungi, viruses and bacteria. The greatest benefit of grapefruit seed-extract is due to its multipurpose effect. Grapefruit seed-extract naturally detoxifies which enhances and supports the immune system. Another important benefit is that it alkalizes the blood raising the pH level. This is an important health regeneration benefit; because disease causing microforms, such as parasites, fungi, viruses and bacteria cannot survive in an alkaline oxygenated environment.

Papaya (*Carica Papaya*) - Papaya Leaf contains a substance called papain, which is chemically similar to pepsin, an enzyme that helps digest protein in the body and it is a safe and natural digestive aid. Papain is used to treat arthritis, for round worm infestation, stomachalgia, dyspepsia, constipation, amenorrhoea, skin diseases and general debility. Recently a Taiwanese research team found that animals pretreated with Papaya Leaf were significantly more resistant to stress-induced ulcers than untreated animals. Papaya Leaf's tendency to reduce acid secretion could account for these effects.

Pumpkin (*Cucurbita Pepo*) - Pumpkin seeds contain 30% unsaturated fixed oil (which includes linoleic and oleic fatty acids). The seeds also contain cucurbitacins, magnesium, iron, phosphorus, selenium, zinc, vitamin A, B and vitamin C. This plant is used medicinally to help improve bowel function by ridding the intestinal tract of parasites and worms. Pumpkin seed has been used in traditional medicine as an anthelmintic (an agent used to expel intestinal worms), taeniocide (an agent which kills tapeworms) and as a diuretic. The seeds are one of the most efficient vermifuges in the plant kingdom.

Quassia (*Quassia Amara*) - The extremely bitter, quassia wood, has multiple benefits. It is an unadulterated stimulant that is associated with the stomach. At the same time, it is an effective vermicide and mildly narcotic (a substance that soothes or induces sleep). At the same time quassia is a precious medication for recuperation, especially after an acute ailment. It also aids in debility or feebleness, atonic dyspepsia or unstressed acid indigestion and in an anti-spasmodic fever.

Senna (*Cassia Angustifolia*) - Is a purgative, having the active ingredients anthraquinone, their derivatives and glucosides. Its action is on the lower bowel, and is especially useful in alleviating constipation. It increases the peristaltic movements of the colon. It is also effective as a vermifuge. Used for: biliousness, bad breath, colic, constipation, gallstones, gout, jaundice, menstruation, mouth sores, obesity, boils, pimples, rheumatism, skin diseases and worms.

Quisqualis (*Quisqualis Indica*) - In traditional Chinese medicine, quisqualis has sweet and warm properties and is associated with the Spleen and Stomach meridians. Its main functions are to kill parasites, strengthen the spleen and dissolve accumulations in the body. Quisqualis is used to treat roundworms and abdominal distention, and to improve one's appetite. It is sometimes given to infants to relieve indigestion and improve appetite.

Torreyia Grandis (*Torreyia Grandis*) - Is a traditional Chinese medicine used on the lung and intestine meridians to eliminate intestinal parasites, such as hookworm, roundworm and tapeworms.

Additional Ingredients:

Demineralized water, 20% ethanol
