

# Ultimate Phenolics

Desensitizer Phenolic Homaccord  
2 oz. Concentrated Homeopathic Tincture NPN 80049856

## Patient Reference

### Ultimate Phenolics

**Neurotransmitter\* Hormone \*Amino Acid \*Chemical\* Preservative\* Phenolics**

**Ultimate Phenolics** in a 60 mL cobalt blue bottle (protects the remedy) was created using a similar approach as the Ultimate Flowers. The Spagyric process allows for a unique panoply of multi-ingredient potencies in a few, rare instances such as found in these two remedies. These nosodes are in homaccord potencies and were designed specifically to be custom potentized or custom grafted. EAV practitioners can find the specific phenolic remedy in their instruments and imprint the frequency(s) into the Ultimate Phenolics thereby fully customizing a desensitizing remedy for the patient without having to give the patient several different remedy bottles. Other practitioners may wish to "graft" from an existing phenolic remedy (3 drops) into the Ultimate Phenolics to accomplish a somewhat similar purpose. For example "graft" 3 drops of GABA, Coumarin, ApioI etc into the Ultimate Phenolics.

*Note: ATP 5x for homeopathic empowerment/Krebs cycle and Mesenchyme 6X, 9X, 6CH to assist with ECM (extracellular matrix) drainage.*

A doctor once reported that, "... phenolics are what makes life worth living". They are the colours, flavours, smells, natural preservatives, neurotransmitter and hormonal expressions of the Vital Force. They are also the reactive agents in foods, allergies, supplements, drugs, chemicals, perfumes, pesticides, herbicides, insecticides, dental products, pollens, dust, molds, etc. These phenolics are inhaled, ingested and consumed. They are often processed slowly by compromised detoxification systems, thereby creating sensitivity challenges for people.

Conventional medicine defines an allergic reaction as the production of IgE antibodies in response to antigenic proteins. While phenolics compounds do not act as antigens themselves, they are believed to be capable of becoming antigenic once they enter the body of sensitive individuals. Complaints such as headaches from eating chocolate, or an itchy, swollen tongue from ingesting a piece of fruit are common reactions in those who are sensitive to phenolics.

Multiple chemical sensitivities, adverse reactions to virtually all foods, Chronic Fatigue, Asthma, chronic respiratory complaints, ADD/ADHD and Autism are all indications of possible sensitivity to phenolic compounds.

Additional symptoms associated with phenolics may include :

- Diarrhea, bloating, and gas
- Dermatitis, eczema, and psoriasis
- Arthritis and rheumatism
- Nausea, dizzy spells
- Tachycardia and hypertension
- Inability to concentrate, memory lapses

Research has shown that homeopathic doses of phenolic compounds can help neutralize their adverse effects, dramatically decreasing the allergic load on the body. This can be useful to provide relief to those who seemingly react to everything, allowing time to re-establish correct cellular communication and detoxification pathways.

*Ultimate Phenolics* is a Spagyric homeopathic blend of 37 phenolics designed to address the toxic burden of today's world. Each phenolic is designed in a homaccord potency of 6X, 12X, 30X, 200X, 12CH, 30CH, 60CH, 200CH, ensuring clarification at multiple levels.

*Ultimate Phenolics* is fully customizable, making it an effective and efficient solution for any desensitization protocol.

All Ingredients are in an ascending homaccord potency of 6X, 12X, 30X, 200X, 12CH, 30CH, 60CH, 200CH

#### Ingredients:

Acetalcholine Chloride  
Acetaldehyde  
Apiolum  
Ascorbic Acid  
ATP 5X  
BHT  
Caffeic Acid  
Candida Albicans  
Chlorogenic Acid  
Cinnamic Acid

Coniferyl Alcohol  
Coumarin  
Dopamine  
Estrogen  
GABA  
Gallic Acid  
Histamine  
Indole  
L-Dopa  
Malvin

Mannan  
Melatonin  
Menadione  
Mesenchyme 6X, 9X, 6CH  
Norepinephrine  
Octopamine  
Phenylalanine  
Phenylisothiocyanate  
Phloridzin  
Piperine

Progesterone  
Pyrole  
Quercetin  
Rutin  
Salsolinol  
Serotonin  
Taurine  
Testosterone  
Tryptophan
